

LIAM MOODLEY

ljmoodley03@gmail.com • +27 60 724 2055 • Johannesburg, Gauteng • [LinkedIn](#) • [Portfolio](#)

Profile

Developer and researcher building AI systems, web applications, and interactive technologies. MA by Research investigating corporate credit-model validation, machine learning, and AI model risk governance within financial institutions. Experience spans Python-based LLM systems, Microsoft Azure, workflow automation, and production React applications, with a strong ability to translate research and business requirements into deployable technical solutions.

Skills & Proficiencies

AI / Cloud	Retrieval-Augmented Generation (RAG), LLM API integration, AI automation, MS Azure, Azure AI Foundry, Power Apps Dataverse, Microsoft Copilot Studio
Languages	JavaScript (primary), Python, HTML, CSS, PHP
Web	React, React Router, Chart.js, Three.js, WordPress, Vercel, API design & integration, JSON
Research	DevOps research, technical reporting, solution architecture, end-to-end solution delivery.
Soft Skills	Stakeholder communication, cross-collaboration, problem solving, time management, critical thinking, adaptability

Work Experience

CEO & Founder <i>NIAEXE Interactive — web development & AI-ethics consultancy</i>	Johannesburg, SA Jan 2021 – Present
Founded a digital consultancy delivering 14 cross-sector projects in healthcare, HR, NGOs, and marketing, achieving 100% client retention and 30,000+ user interactions, while driving measurable impact through SEO optimization (0 to 85% organic visibility, 30% lead conversion), full-stack web development with custom PHP/JS solutions and 99% uptime, and proactive IT support that reduced website downtime by 80%.	
Digital & AI Intern <i>Redflank Consultancy — strategy & advisory firm</i>	Johannesburg, SA May 2026 – Present
- Researched, designed, and developed an enterprise AI knowledge assistant that enables staff to search internal organisational documents and receive secure, citation-based responses. The work included evaluating suitable AI and cloud approaches, defining the system architecture, and building the solution using Azure AI services, Microsoft Copilot Studio, and Retrieval-Augmented Generation (RAG). - Worked under direction to research DevOps, automation, and digital process improvement opportunities across the business, then translated those findings into practical solutions. Built and improved workflows supporting onboarding, staff training, tender tracking, project support, and other internal operational processes using Microsoft Power Automate, Dataverse, and the Power Platform.	
AI and Software Systems Development Intern — Wits Darkroom / merSETA <i>Future of Learning Project</i>	Johannesburg, SA June 2026 – June 2026
Apart of a team whose task was to develop full-stack components for an AI learning platform integrating LLMs, VR, and data systems. Build and maintain features for the data mapping, including UI, APIs, and data visualisation. Contribute to a citation-based LLM system, including prompt handling and output validation. Working with data science and research teams to translate models into deployable software features. Support testing and debugging of AI systems, focusing on reliability and performance.	
Teaching Assistant <i>University of the Witwatersrand — Digital Arts</i>	Johannesburg, SA Jan 2026 – Present
Academic tutor for fourth & second year Interactive Engineering and second-year Digital Arts Theory: run coding tutorials in JavaScript and React, including GitHub Pages deployment, mark assignments, and lead discussions on critical philosophy and the theory of AI use.	

Projects

- Skewed Lenses** — An AI ethics web tool where neurodivergent individuals’ complete tasks, and the system evaluates how consistently different AI models interpret patterns in their responses. One prompt goes to four LLM APIs (Llama, OpenAI, Claude, Gemini) that compare their responses against each other and deliberate toward a shared outcome, while the tool visualises where they diverge and surfaces model-to-model inconsistency. React, multi-agent LLM orchestration in Python.
- Subtrakt** — React SPA for tracking recurring subscriptions in the South African market. Users log subscriptions, see total committed spend across the month and year, set and track against a budget, and view where their money goes through Chart.js visualisations. Built with React Router and a component-driven state model.

Education

University of the Witwatersrand <i>MA by Research — Credit-model validation & AI governance (warning of model failure under economic stress)</i>	Johannesburg, SA 2026 – Present
University of the Witwatersrand <i>BA in Digital Arts (Honours) — Game Development & Interactive Media</i> First-class distinctions in Digital Arts Research Project, Digital Arts Project IV, and Interactive Media IV.	Johannesburg, SA 2022 – 2025
Saïd Business School, University of Oxford <i>Professional Programme, AI Governance & Ethics — fairness, accountability & human rights in public-sector AI</i>	Online – Short Course (In Progress - 2026)

Certifications

- Absa Design Hackathon (2024) • Absa Leadership Workshop (2025) • Python Programming MOOC - University of Helsinki (In Progress - 2026)
- Research Ethics (2026) • Google AI Specialization (In Progress - 2026)
